Results by scenario

A user deposits the capital, follows every pick in publication order and sizes each stake with the platform calculator (fractional Kelly with a hard cap of 5% of the bankroll; flat staking when there is no edge). Profits compound.

CONSERVATIVE (QUARTER KELLY), \$5,000

\$5,000 → \$8,099

+62.0% · max drawdown 25.8%

MODERATE (HALF KELLY), \$5,000

\$5,000 → \$10,356

+107.1% · max drawdown 30.1%

CONSERVATIVE (QUARTER KELLY), \$10,000

\$10,000 → \$16,197

+62.0% · max drawdown 25.8%

MODERATE (HALF KELLY), \$10,000

\$10,000 → \$20,712

+107.1% · max drawdown 30.1%

Transparency: this history includes our worst night of the tournament (July 11, two hits out of eleven picks, both quarterfinals went to extra time). Nothing was removed or dressed up. That night explains the maximum drawdown of the simulation. The system recovered and the final balance is what you see above.

Methodology

Every pick is published on the platform before kickoff with its best available price across more than 40 books, and settled on the result at 90 minutes (extra time and penalties do not count, same as the books settle these markets). Stakes follow the platform calculator: when the model sees an edge, fractional Kelly on the model probability, capped at 5% of the current bankroll; when there is no edge, a flat stake (2% at quarter Kelly, 4% at half Kelly). The bankroll compounds pick by pick in kickoff order. The detailed table below uses the conservative scenario: quarter Kelly starting with \$5,000.

Pick by pick (quarter Kelly, \$5,000 start)

DATE	MATCH	PICK	ODDS	RESULT	STAKE	P&L	BANKROLL
30 Jun	France vs Sweden	France to win	1.32	WIN	\$100	+\$32	\$5,032
30 Jun	France vs Sweden	Under 3.5 goals	1.85	WIN	\$252	+\$214	\$5,246
